Market Poultry Basics

What to look for and do the day birds arrive:

- Check beaks - they are trimmed before shipping if too short they will have trouble eating
- Legs and toes should be straight with no deformities
- Birds should be alert and active
- Be sure to bring water with you. Birds are shipped soon after they are born.

When you bring them home:

- Add electrolytes to water. (can be found at any feed store)
- Teach birds to drink by gently dipping their beaks in water source
- Feeding the proper type of feed at the correct age is important:
 - Turkeys - starter mash
 - Chickens – broiler starter ration
 - Ducks – starter mash for first four weeks (22 – 24% protein), then switch to 20% protein finisher - do not use medicated feeds

Do not use stale, spoiled or moldy feed

Make sure birds have plenty of fresh feed and water at all times

Facilities for healthy growth:

- Birds need to be kept warm and dry
- Ventilation and sanitation are very important
- Room to move and exercise must be available
- Protection from weather, disease and predators is necessary

As they grow:

- Facility area needs to grow with growing birds
- Ventilation and sanitation should be top priorities
- Some good bedding choices are: wood shavings, ground corn cobs or rice hulls and straw

Going to the fair:

- Review project books to help you select birds for the fair
- Review the Junior Fair Activities Guide for rules, dates, times and locations of all fair events
- Make sure your birds are clean for the fair and throughout the fair
- Exhibitors are responsible for feeding and watering their birds throughout the day each day of the fair.

Remember to have fun while you learn with your project!
